

## **"Affiliation, Permanence, and the Resilience of the Republic: Exploring Societal Constructs and Governance Structures"**

~Tr. Rahul Goswami

*Instinctively, man is primed to seek affiliation, and it's this affiliation that defines him much more often than he could ever do it by himself. Central idea being it's often the connections we make or are forced into that provide us refuge to fall back into, in the event of chaos.*

*As we go about life, our mind maps out familiar relationships and aligns those into power hierarchy of which we'll talk about later as we tread through. This essay will delve upon questions regarding the origins, motivations, and the support structure which immune the republic from disintegration which once seemed inevitable. Since its inception, the republic sustained elements of nature and didn't fell apart, not so much due to the force of primary intent, but maybe due to the fraternal motivation hidden underneath.*

*There's something in permanence which feels real. In all philosophical constructions, the most valued knowledge remains to which antiquity as an attribute is accorded. Humans tend to preserve such knowledge which shows signs of permanence. It may seem at the outset that it could be on account of its resistance to chaos, a reprisal from an impulsive organism when it's exposed to the unknown. But a compelling case could be made that it's not only his parochial impulses but the knowledge standing the test of time. Hence, it becomes our honourable duty to protect and preserve the republic from breaking into pieces.*

*We shall now explore themes from legal studies and economics, in order to discuss different models and social myths that'll keep the republic afloat. It's of vital responsibility to comprehend the importance of fiction as a scaffolding in reinforcing social cohesion in human society. Till now impulses and passion have caused us to exist in cohesion but these are fragile and brittle, under elemental forces these tends to succumb.*

*Conversely legal and economic fiction sets the show for powerful hierarchies that are hard to break. What this does is shedding the elusive mists of chaos by furthering clarity from apprehensive disorder. It secures power structure into a reasonably legitimate hierarchy to which every subject submit, hence forging taller barriers to exit. Coupled with economic motives, already taller impediment augments and the impulse to exit becomes fairly easy to resist. These structures which initially seemed unreal gradually solidifies to the point of intimacy into our psyche. Though these structures are powerful, the elites still have to dispense their power in fairness, as impulses grow exponentially . And once these prompt revolution, it takes an even more complex story for elites to rationalise their power.*

*In conclusion, I want to communicate a very simple and fair idea, that the legal superstructure at place stems from the need to preserve this republic. Anything other than keeping this republic as one is a sham and political facade.*
